Nick Pappani Raney Planning & Management 1501 Sports Drive, Suite A Sacramento, California 95834

Subject: PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

CLAYTON COMMUNITY CHURCH

1027 PINE HOLLOW COURT CLAYTON, CALIFORNIA

Dear Mr. Pappani:

This Phase I Environmental Site Assessment (ESA) of the approximate 4.5-acre property (Site) located at 1027 Pine Hollow Court in Clayton, California was completed in accordance with your request. The Site is further identified as Contra Costa County Assessor's Parcel Number 119-050-036-1.

We performed this Phase I ESA for Raney Planning & Management (the Client), on behalf of the Clayton Community Church, to assess the potential for existing hazardous substances and/or petroleum product impacts at the Site prior to redevelopment as a church, parking, driveways, and landscaping. This ESA was performed for the purpose of fulfilling California Environmental Quality Act (CEQA) requirements.

This report summarizes the findings of the Phase I ESA including the potential presence of recognized environmental conditions as defined by the American Society for Testing and Materials (ASTM) Designation E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

We appreciate the opportunity to have performed this Phase I ESA for Raney Planning & Management and the Clayton Community Church. Please contact us if you have any questions concerning this report, or if we may be of further service.

Sincerely,

GEOCON CONSULTANTS, INC.

Suzanne Nase Project Geologist John E. Juhrend, PE, CEG Senior Engineer

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

1.0 INTRODUCTION

Geocon Consultants, Inc. has performed a Phase I Environmental Site Assessment (ESA) of the property at 1027 Pine Hollow Court (the Site) in Clayton, Contra Costa County, California (Figure 1). This report summarizes the methodology and presents the findings of the Phase I ESA. We performed the Phase I ESA for Raney Planning & Management (Raney, the Client), on behalf of the Clayton Community Church, to assess the potential for existing hazardous substances and/or petroleum product impacts at the Site prior to redevelopment as a church, parking, driveways, and landscaping. This ESA was performed for the purpose of fulfilling California Environmental Quality Act (CEQA) requirements.

1.1 Purpose and Objectives

The purpose of the Phase I ESA was to identify evidence or indications of 'recognized environmental conditions' (REC) as defined by the American Society for Testing and Materials (ASTM) Designation E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Section 1.1.1 of ASTM Designation E 1527-13 defines an REC as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

De minimis conditions are not recognized environmental conditions." De minimis conditions are those that generally do not present a threat to human health or the environment and that generally would not be the subject of the enforcement action if brought to the attention of appropriate governmental agencies.

ASTM Designation E1527-13 also defines 'Historical' and 'Controlled' RECs (HREC and CREC, respectively). An 'Historical REC' is defined as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." A 'Controlled REC' is defined as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." An HREC is not an REC if the property meets current standards for unrestricted residential use. A CREC remains an REC by definition when the property does not meet the unrestricted residential use requirement unconditionally.

We also conducted the Phase I ESA in general accordance with the requirements of 40 Code of Federal Regulations (CFR) Part 312 titled *Standards and Practices for All Appropriate Inquiries*, as required under Sections 101(35)(B)(ii) and (iii) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The purpose of conducting an all appropriate inquiries investigation into the previous ownership and uses of a property is to meet the provisions necessary for the landowner, contiguous property owner, and/or bona fide prospective purchaser to qualify for certain landowner liability protections under CERCLA.

The following principles are an integral part of ASTM *Designation E1527-13*:

- "Uncertainty Not Eliminated No environmental site assessment can wholly eliminate
 uncertainty regarding the potential for recognized environmental conditions in connection
 with a property. Performance of this practice is intended to reduce, but not eliminate,
 uncertainty regarding the potential for recognized environmental conditions in connection
 with a property, and this practice recognizes reasonable limits of time and cost."
- "Not Exhaustive All Appropriate Inquiries does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an environmental site assessment and the reduction of uncertainty about unknown conditions resulting from additional information."
- "Level of Inquiry is Variable Not every property will warrant the same level of assessment. Consistent with good commercial and customary practice, the appropriate level of environmental site assessment will be guided by the type of property subject to assessment, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry."

1.2 Scope of Services

The main components of the Phase I ESA and their objectives, as specified by the referenced standards, include the following:

- **Physical Setting:** We reviewed physical setting references to obtain information concerning the topographic, geologic, and hydrogeologic characteristics of the Site and vicinity. Such information may be indicative of the direction and/or extent that a contaminant could migrate in the event of a spill or release.
- **Records Review:** We reviewed publicly available Federal, State, and local regulatory agency records to obtain information that could potentially help identify RECs at or potentially affecting the Site.
- **Site History:** We reviewed historical references to assess the history of previous uses of the Site and surrounding area to identify those that could have led to RECs on or near the Site. Historical sources reviewed included aerial photographs and topographic maps
- **Site Reconnaissance:** We performed a site reconnaissance to observe site conditions and activities for indications of evidence of RECs. The site reconnaissance was for the Site only. Offsite properties and features were viewed solely from the vantage of the Site and public thoroughfares.

1.3 Report Limitations

We prepared this Phase I ESA report exclusively for the Client and acknowledge the Clayton Community Church's use of this report. The information obtained is time sensitive and only relevant for the dates of the records reviewed and the latest site visit. Therefore, the information contained herein is only valid as of the date of the report and will require an update after 180 days to reflect updated records and another site reconnaissance to assess current site conditions.

The Client and Clayton Community Church should recognize that a Phase I ESA is not a comprehensive site characterization and should not be construed as such. The findings and conclusions presented in this report are predicated on the site reconnaissance, information in the specified regulatory records, and information regarding the historical usage of the Site, as presented in this report. The Client and Clayton Community Church should also understand that wetlands, asbestos-containing building materials (ACM), lead-containing paint (LCP), lead in drinking water, radon, mercury related to mining activities, methane, and mold surveys were not included in the scope of services for this Phase I ESA. Assessment for potential naturally occurring hazards such as asbestos and arsenic was also not included.

Therefore, this report should only be deemed conclusive with respect to the information obtained. No guarantee or warranty of the results of the Phase I ESA is implied within this report or any subsequent reports, correspondence or consultation, either express or implied. We strived to conduct the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

1.4 Data Gaps

A data gap is defined by ASTM *Designation E 1527-13* as "a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information." Data gaps could include such things as insufficient historical information, the inability to interview persons with direct site knowledge (e.g., the owner(s), past owner(s), tenants, workers, etc.) or the lack of access to all parts of a site during the site reconnaissance.

We did not encounter any significant data gaps during the ESA process.

2.0 SITE DESCRIPTION

This section provides information regarding the location and physical characteristics of the Site including its size, topography, geologic, soil, and hydrogeologic conditions.

2.1 Location and General Characteristics

The Site is located at 1027 Pine Hollow Court in Clayton, California. The Site is additionally identified as Contra Costa County assessor's parcel number (APN) 119-050-036-1. A copy of the Contra Costa County assessor's parcel map is in Appendix A. The Site is owned by Clayton Community Church.

The Site is located at the end of a cul-de-sac on Pine Hollow Court in a residential area. The approximate 4.5-acre site is generally vacant with the exception of an existing single-family residence near the southwestern corner and storage structures in the northwestern corner (Figure 2).

2.1.1 Topography

The Site contains a notable southeast-facing slope starting from the northeast corner to the center of the southern boundary. The top portion of the property is relatively flat at approximately 450 feet above mean sea level (msl). The slope drops approximately 50 feet to a lower portion of the property at the southeast corner. Storm water runoff across the Site would likely flow generally from northwest to southeast.

2.1.2 Geologic and Soil Conditions

The Site is located in the eastern portion of the San Francisco Bay and lies at the foot of Mount Diablo. Sediments in the site vicinity consist of Holocene age unconsolidated to semi-consolidated alluvium from igneous and sedimentary rocks, (Preliminary Geologic Map of the Clayton Quadrangle, Contra Costa County, California, Dibblee 1980).

Information concerning the soil conditions onsite was obtained from review of the United States Department of Agriculture, Natural Resources Conservation Service (NRCS) website (http://websoilsurvey.nrcs.usda.gov/app/HomePage.htm). The NRCS website soil survey report indicates that onsite soil consists of Perkins gravelly loam, which is made up of gravelly loam to a depth of 19 inches, with gravelly clay loam from a depth of 19 to 60 inches. The Perkins unit is well-drained with a moderately high infiltration rate (NRCS, 2016).

2.1.3 Hydrologic and Hydrogeologic Conditions

Depth to groundwater is typically more than 80 inches in the Perkins unit. The nearest surface water feature is Mitchell Creek located just outside of the eastern site boundary. The creek is a drainage pathway from Mount Diablo, located south of the Site. The creek was dry at the time of this ESA.

Due to the relatively steep slope on the Site and the close proximity to Mount Diablo, the inferred groundwater flow direction is toward the east to northeast.

2.2 Current and Planned Uses of the Site

The Site consists of mostly vacant land. There is a single-family residence near the southwestern corner. A barn-type building currently used for storage and a garden shed are located in the northwestern corner. It is our understanding that the Clayton Community Church requested that we conduct the Phase I ESA to address due diligence requirements for CEQA. Clayton Community Church plans to develop the Site with a church, paved parking and driveways, with landscaping, all on the upper portion of the Site. No development is planned for the lower portion of the Site.

2.3 Current Uses of Adjoining Properties

The Site is bordered on the north by Mount Diablo Elementary School. Pine Hollow Court, across which are residential properties, is adjacent west of the Site. A vacant lot with native grasses and Mitchell Creek is adjacent east of the Site. High Street, a private road, beyond which are residential properties, is adjacent south of the Site.

3.0 USER-PROVIDED INFORMATION

A complete user questionnaire was received from Raney (Appendix B). No additional information was provided by Raney.

3.1 Environmental Liens or Activity and Use Limitations

Raney indicated that they are not aware of any environmental liens on the Site. There is no other activity and use limitations for the Site.

3.2 Specialized Knowledge

Raney indicated that they have no specialized knowledge regarding past or current uses of the Site of nearby properties that could potentially impair or could have impaired the environmental conditions of the Site.

3.3 Commonly Known or Reasonably Ascertainable Information

3.3.1 Past Use

Raney is aware that the Site was previously occupied by one single family home built in 1958 and orchards.

3.3.2 Site Chemicals, Releases, and Cleanups

Raney is not aware of chemicals storage, chemical spills or releases, or any environmental cleanups on the Site. Raney is not aware of any indicators on Site that would point out the presences or likely presence of contamination on the property.

3.3.3 Fair Market Value

RCD believes that the purchase price of the Site is considered a fair market value.

3.4 Reason for Performing Phase I ESA

RCD requested the Phase I ESA to obtain information regarding the potential for existing hazardous substances and/or petroleum product impacts at the Site for building entitlements.

4.0 RECORDS REVIEW

This section summarizes information we obtained from readily available agency records pertaining to the Site and properties and facilities in the vicinity of the Site.

4.1 Standard Environmental Record Sources

Environmental Data Resources, Inc. (EDR) searched federal, state, and local environmental databases for the Site and properties/facilities within one mile of the Site. The following table summarizes the databases that were searched which have records and the number of properties/facilities listed. Other databases searched that do not list any properties/facilities are not included in the table. A copy of the report: *The EDR Radius Map Report with GeoCheck*, dated June 15, 2020, is presented in Appendix C.

Database Name	Search Radius (Miles)	Number of Listings	
FEDERAL DATABASES			
RCRA – Large Quantity Generator (LQG)	0.25	1	
STATE, LOCAL, AND TRIBAL DATABASES			
CA Leaking Underground Storage Tank (LUST)	0.5	1	
CA UST	0.25	1	
CA CERS HAZ WASTE (CalEPA Regulated Site Portal hazardous waste sites)	0.25	1	
CA Statewide Environmental Evaluation and Planning System (SWEEPS) UST	0.25	1	
HIST UST	0.25	1	
CERS TANKS (Cal EPA Regulated Site Portal AST and UST regulated sites)	0.25	1	
RCRA NonGen/NLR		5	
Cortese	0.5	1	
CA HAZNET - Facility and Manifest Data	Target Property	1*	
CA HIST CORTESE (Historical ("Cortese" Hazardous Waste & Substance Site List)	0.5	1	
Contra Costa County Site List	0.25	2	
Hazardous Waste Tracking System (HWTS)	Target Property	1*	
* Indicates that the Site is listed in the database			

4.1.1 Site

The Site is listed on the HAZNET and HWTS databases for generating, properly storing, and offsite disposal of 50 gallons of waste oil and 300 pounds of organic solids in 2013. No violations were noted.

4.1.2 Offsite Properties

Based on the agency database search, none of the listed facilities had reported chemical releases located within approximately ½ mile upgradient (¼ mile for LUST facilities or facilities with known, regional groundwater contaminant plumes).

4.1.3 EDR Orphan Summary

The Orphan Summary identifies facilities that have incomplete address information and could not be specifically plotted. The Orphan Summary had no properties listed.

4.2 Other Environmental Record Sources

4.2.1 GeoTracker and EnviroStor

We reviewed the GeoTracker and the DTSC's EnviroStor (http://www.envirostor.dtsc.ca.gov/public/) online databases for environmental assessment and cleanup at the Site and/or properties/facilities within ½ mile of the Site. No listings were found on either database for the Site and/or nearby properties.

4.2.2 Contra Costa Health Services

We requested available Contra Costa Health Services files pertaining to compliance inspection reports, hazardous substances, USTs, releases, inspection records, etc. for the Site. There were no records for the Site.

4.2.3 Contra Costa County Fire Protection District

We requested available Contra Costa County Fire Protection District records for information pertaining to compliance inspection reports, hazardous substances, USTs, releases, inspection records, etc. for the Site. There were no records for the Site.

4.2.4 California Department of Conservation – Geologic Energy Management Division

We reviewed the California Department of Conservation – Geologic Energy Management Division (CalGEM) website (http://www.consrv.ca.gov/calgem/) for oil or gas wells within the site vicinity. There are no oil or gas wells depicted on the Site or nearby vicinity on the CalGEM maps.

<u>4.2.5</u> <u>U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration</u>

We reviewed the U.S. Department of Transportation's Pipeline and Hazardous Materials Safety Administration (PHMSA) website (www.npms.phmsa.dot.gov) which provides mapped locations of petroleum and natural gas pipelines. The PHMSA website indicates that the nearest hazardous liquid pipeline follows Clayton Road, approximately 2,000 feet east of the Site.

5.0 HISTORICAL USE

We evaluated the historical use of the Site and adjacent properties through review of historical aerial photographs and historical topographic maps provided by EDR. Sanborn Fire Insurance Maps (Sanborn maps) were requested. EDR reported that the property was unmapped. This section summarizes information obtained from these sources.

5.1 Aerial Photographs

We reviewed historical aerial photographs provided by EDR for the years 1939, 1946, 1949, 1950, 1958, 1963, 1966, 1979, 1982, 1993, 1998, 2006, 2009, 2012, and 2016 for indications of past land uses that had the potential to have impacted the Site through the use, storage or disposal of hazardous substances and/or petroleum. Copies of the aerial photographs reviewed are in *The EDR Aerial Photo Decade Package* dated June 15, 2020, in Appendix D. The following table summarizes our observations of the Site and adjacent properties visible on the aerial photographs.

Year(s)	Site	Adjacent and Nearby Properties
1939, 1946, 1949, & 1950	The Site was used for orchards.	Agricultural fields surrounded the Site. The town of
SCALE: 1"=500'		Clayton can be seen east of the Site, beyond the
		creek.
1958	A structure, which is assumed to	Structures which are assumed to be the elementary
SCALE: 1"=500'	be the residential home, was	school was present northwest of the Site
	present in the southwest corner of	
	the Site	
1963	No apparent changes to the Site.	A residential neighborhood was present southwest
SCALE: 1"=500'		of the Site
1966	Some of the trees had been	The residential neighborhood had expanded west of
SCALE: 1"=500'	removed from the eastern half of	the Site
	the Site. A driveway was present	
	leading to the house.	
1979 & 1982	No apparent changes to the Site.	Much of the agricultural fields near the Site has
SCALE: 1"=500'		been replaced by residential neighborhoods.
1993, 1998, 2006, 2009,	No apparent changes to the Site.	The nearby agricultural fields have all been
2012, & 2016		replaced by residential housing.
SCALE: 1"=500'		

Base on the historical aerial photographs it is difficult to pinpoint when the orchard operations ceased on the Site. However, the historic presence of orchards on Site and the surrounding properties is a potential environmental concern for pesticides.

5.2 Topographic Maps

We reviewed historical topographic maps for the years 1896, 1898, 1912, 1943, 1953, 1968, 1973, 1980, and 2012 (Appendix E) for indications of past land uses that had the potential to have impacted the Site through the use, storage or disposal of hazardous substances and/or petroleum products. The following table summarizes our observations of the Site and adjacent properties on the topographic maps.

Year(s)	Site	Adjacent and Nearby Properties
1896 & 1898 Mount Diablo, CA SCALE: 1:62,500	No indication of land use was depicted on the Site.	Buildings were located north and south of the Site. Sparse development for the town of Clayton was located to the east. Mitchell Creek runs east of the Site.
1912 & 1943 Mount Diablo, CA SCALE: 1: 62,500	Orchards were depicted on the Site.	Agricultural land/orchards use was depicted surrounding the Site. Mount Diablo School was located north of the Site
1953, Clayton, CA SCALE: 1:24,000	A building was depicted on the Site.	Buildings were depicted on the streets east of the Site.
1968, 1973, 1980, & 1994 Clayton, CA SCALE: 1:24,000	No apparent changes to the Site.	Surrounding streets continued to develop.
Clayton, CA SCALE: 1:24,000	No site features or specific land uses were depicted on the Site.	No features or specific land uses were depicted on adjacent or nearby properties.

The history of orchards on Site and the surrounding properties is a potential environmental concern for pesticides.

6.0 SITE RECONNAISSANCE

This section summarizes our observations of the Site and surrounding properties made during the site reconnaissance.

6.1 Methodology and Limiting Conditions

Suzanne Nase, Project Geologist with Geocon Consultants, Inc., performed a site reconnaissance on June 30, 2020. Ms. Nase was met by Mick Wakefield who has lived on site for the past 6.5 years. The site visit consisted of walking throughout the Site and along the site perimeter to observe site features and conditions. The offsite survey was performed by making observations of adjacent properties from the Site and public roads. Photographs of various Site and offsite features are attached.

6.2 Site Setting

The Site is situated in a residential area with the downtown area east of the Site. Site features observed during our reconnaissance are depicted on the Site Map, Figure 2.

6.3 Onsite Survey

As described in Section 2.2, the Site is a fenced lot with a single-family residence near the southwestern corner (Photo 1). Common household chemicals were observed in the house. The house has a below-grade basement, approximately 12 feet by 8 feet, accessed by an outside door (Photo 2). A majority of the Site is vacant with natural grasses and some trees from the previous orchards (Photo 3).

Mr. Wakefield stated that the orchard operations have not occurred while he has been on Site for the past 7 years. To his knowledge, an active orchard has not been on the Site for quite some time. A barn and a garden shed are located in the northwestern corner which are currently used for storage (Photos 4 and 5). No chemicals were observed in either storage structure. A southeast-facing slope divides the Site into upper and lower portions of the property (Photos 6 and 7). A well house is located in the southeast corner of the Site (Photo 8 and 9). It is unknown when the last time the well was used. Mr. Wakefield stated that it has not been used in the past 7 year that Clayton Community Church has owned the property.

No evidence of RECs or other environmental concerns were observed during the site visit.

6.4 Offsite Survey

Adjacent and nearby properties consist of residential, commercial and retail properties. A summary of field observations is listed below:

- North The Site is bounded by Mount Diablo Elementary School.
- East The Site is bounded by a vacant lot with native grasses which has Mitchell Creek running through it. Downtown Clayton is east of the creek.
- South High Street beyond which are private residences.
- West Pine Hollow Court beyond which are private residences.

No evidence of environmental concern was observed at properties adjoining the Site during the site reconnaissance.

7.0 CONCLUSIONS AND RECOMMENDATIONS

We have performed this Phase I ESA in general conformance with the scope and limitations of ASTM *Designation E 1527-13* at 1027 Pine Hollow Court (APN 119-050-036-1) in Clayton, Contra Costa County, California. The Site is owned by Clayton Community Church. Raney, requested that we conduct the Phase I ESA to address CEQA requirements prior to redevelopment as a church, parking, driveways, and landscaping. The 4.5-acre site is mostly vacant lot with a single-family residence near the southwestern corner and two storage structures in the northwestern corner. Exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

This Phase I ESA has revealed no evidence of RECs or potential environmental concerns in connection with the Site with the exception of the following:

Persistent residual pesticides may be present in shallow onsite soil based on the historical orchard operations at the Site. Soil sampling and analytical testing would be necessary in order to confirm or refute the presence of pesticide impacts at concentrations requiring mitigation based on land use specific regulatory screening levels.

The existing onsite water well should be properly abandoned in accordance with regulatory permitting requirements if not planned for use during site grading operations and subsequent redevelopment.

Any undocumented subsurface structures encountered during site clearing/grading operations (i.e. USTs, septic systems, wells, etc.) should be properly removed or abandoned in place in accordance with any applicable Contra Costa County permit requirements.

9.0 QUALIFICATIONS

This Phase I ESA report was prepared by Ms. Suzanne Nase and reviewed by Mr. John Juhrend, PE, CEG, CEM.

Ms. Nase has a BS degree in Geology and 8 years of experience in environmental investigation and remediation projects involving groundwater and/or soil contamination. She has managed and assisted on a variety of projects for both private and public clients in the transportation, oil and gas, and water industries. Ms. Nase has performed Phase I and II ESAs on a variety of projects within California.

Mr. Juhrend has over 35 years of experience in the environmental and geotechnical consulting industry in California and Nevada. Mr. Juhrend is a California Professional Engineer and Certified Engineering Geologist, with a BS degree in engineering geology and MS degree in civil engineering. His personal experience includes the performance of hundreds of environmental projects including Phase I and Phase II site assessments, remedial investigations and feasibility studies, corrective action programs and litigation support. His primary expertise includes environmental assessments of Brownfields properties, industrial, commercial and residential properties, and transportation corridors.

We declare that, to the best of my professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries investigation in conformance with the standards and practices set forth in 40 CFR Part 312.

APPENDIX A

APPENDIX B

AAI Questionnaire

In accordance with ASTM 1527-05 and in order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the user (client or client representative) must provide the following information (if available) to the environmental professional (Geocon). Failure to provide this information could result in a determination that "all appropriate inquiry" (AAI) is not complete.

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

No

2. Are you aware of any area use limitations (AULs), such as engineering controls, land use restriction or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, trial, state or local law?

No

3. As the *user* of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property, so that you would have specialized knowledge of the chemicals and processes used by this type of business?

No

- 4. Does the purchase price being paid for this property reasonable reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?
- 5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the *environmental professional* to identify conditions indicative of releases or threatened releases?
 - a. Do you know the past uses of the property?

 Les, orchards & residentia
 - b. Do you know of specific chemicals that are present or once were present at the property?

NO

c. Do you know of spills or chemical releases that have taken place at the property?

NO

d. Do you know of any environmental cleanups that have taken place at the property?

6.	As the user of this ESA, based on your knowledge and experience related to the property, are		
	there any obvious indicators that point to the presence or likely presence of contamination at		
	the property?		
	NO		

In addition to the above questions, certain information should be collected, if available, and provided to the environmental professional. This information is intended to assist the environmental professional, but is not necessarily required to qualify for one of the LLPs.

The reason why the ESA is required (i.e. sale, purchase, exchange, etc.). 7.

Building entitlements

The complete name, correct address and/or parcel number for the property (a map or other 8.

documentation showing property location and boundaries is helpful).
1027 Pine Hollow Court, Clayton CA 94517 APN: 119 - 050-036

A description of the property (i.e. acreage, square footage, number of buildings, other 9. structures, age of buildings, above/underground storage tanks, etc.)

- 1 single family home (1958)
Knowledge or previous owners and/or previous uses of the property?

10.

orchards & residential

Current or previous deeds? 11.

The site contact name and number.

Mick Waketield 12.

Previous reports available? Any other available documentation, correspondence, etc. 13. concerning the environmental condition of the property?

-Geotechnical Report
-Arborist Report
-Land survey / civil drawings

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/23/2020 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
PACIFIC BELL	6991 HIGH STREET	E 1/8 - 1/4 (0.195 mi.)	A4	13
FPA ID.: CAT080020050				

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there is 1 LUST site within

approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
DIABLO VALLEY HORSE	6455 MARSH CREEK RD	E 1/8 - 1/4 (0.220 mi.)	A8	26

Database: LUST REG 2, Date of Government Version: 09/30/2004 Database: LUST, Date of Government Version: 05/13/2020

Status: Completed - Case Closed

Facility Id: 07-0117 Facility Status: Case Closed Global Id: T0601300109 date9: 8/17/1994

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
PACIFIC BELL/CLAYTON	6191 HIGH ST	E 1/8 - 1/4 (0.195 mi.)	A5	24
Database: UST, Date of Governme	ent Version: 03/09/2020			
Facility Id: 716444				

Facility Id: 07-000-716444

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 01/21/2020 has revealed that there is 1 CERS HAZ WASTE site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
PACIFIC BELL	6991 HIGH STREET	E 1/8 - 1/4 (0.195 mi.)	A4	13

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no

longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
PACIFIC BELL Status: A	6991 HIGH STREET	E 1/8 - 1/4 (0.195 mi.)	A4	13
Tank Status: A Comp Number: 16444				

HIST UST: Historical UST Registered Database.

A review of the HIST UST list, as provided by EDR, and dated 10/15/1990 has revealed that there is 1 HIST UST site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
PACIFIC BELL Facility Id: 0000016444	6991 HIGH STREET	E 1/8 - 1/4 (0.195 mi.)	A4	13

CERS TANKS: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs.

A review of the CERS TANKS list, as provided by EDR, and dated 01/21/2020 has revealed that there is 1 CERS TANKS site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
PACIFIC BELL	6991 HIGH STREET	E 1/8 - 1/4 (0.195 mi.)	A4	13

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/23/2020 has revealed that there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Violations:

Site ID: 433329

Site Name: AT&T California - W1202

Violation Date: 05-09-2019

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23,

Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill

prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection

Map ID MAP FINDINGS Direction

Distance **EDR ID Number** Elevation **EPA ID Number** Site Database(s)

PACIFIC BELL (Continued) 1000251172

> at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: OBSERVATION: The technician was on site on October 15, 2018 and unable

to inspect the UST overfill prevention equipment. The technician was on site on May 9, 2019 and able to inspect the UST overfill prevention equipment. The flapper valve was set at 97%. CORRECTIVE ACTION: The

business must maintain and test the overfill prevention system to comply with the new requirements. The business must submit

verification to CCHSHMP.

23 CCR 16 2712(b)(1)(F) - California Code of Regulations, Title 23, Citation:

Chapter 16, Section(s) 2712(b)(1)(F)

"Failure to conduct secondary containment testing, or one or more of Violation Description:

> the following requirements: Perform the test of the secondary containment system upon installation, within six months of installation and every 36 months thereafter. Perform the test of a secondary containment component within 30 days of a repair or discontinuing vacuum, pressure or hydrostatic monitoring. Use a procedure that demonstrates the system works as well as at installation. Use applicable manufacturer guidelines, industry codes, engineering standard, or professional engineer approval. Performed by

a certified service technician. Maintain records of secondary

containment testing for 36 months."

Violation Notes: Observation: Facility has failed to do one of the following: 1)

> Conduct tightness testing of secondary containment at least once every 36 months 2) Underground storage tank owners and operators shall submit a copy of the G Secondary Containment Testing Report FormG to the local agency within 30 days of the completion of the secondary containment test. 3) The owner or operator shall notify the local agency at least 48 hours prior to conducting the secondary containment test. Corrective Action: Notify CCHSHMP of the Secondary Containment

> Testing date within 48 hours notice and/or Submit a completed G

Secondary Containment Testing Report FormG to CCHSHMP within 30 days

of the testing date.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Universal Tranverse Mercator: Zone 10 UTM X (Meters): 593311.1 UTM Y (Meters): 4199490.0

Elevation: 449 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 5640430 CLAYTON, CA

Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

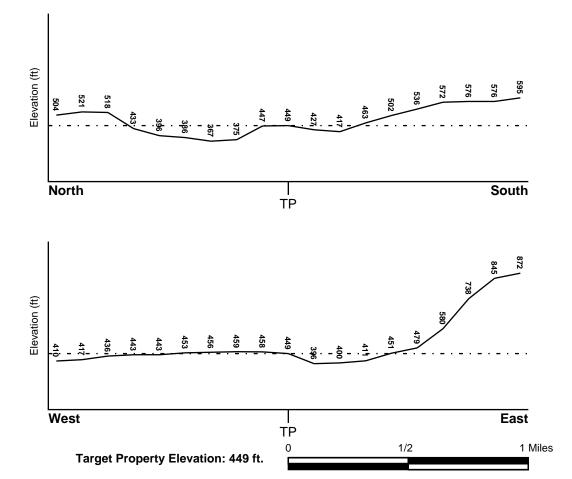

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property FEMA Source Type

06013C0304F FEMA FIRM Flood data

Additional Panels in search area: FEMA Source Type

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

CLAYTON YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: PERKINS

Soil Surface Texture: gravelly loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Oon Roadion
1	0 inches	18 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 7.8 Min: 6.1
2	18 inches	59 inches	gravelly clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 7.8 Min: 6.1

Soil Map ID: 2

Soil Component Name: Perkins

Soil Surface Texture: gravelly loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec (pH)	
1	0 inches	18 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 4 Min: 1.4	Max: 7.8 Min: 6.1
2	18 inches	59 inches	gravelly clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 4 Min: 1.4	Max: 7.8 Min: 6.1

Soil Map ID: 3

ZAMORA Soil Component Name:

Soil Surface Texture: silty clay loam

Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse Hydrologic Group:

textures.

Well drained Soil Drainage Class:

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Soil Layer Information						
	Boundary			Classification		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Soil Reaction (pH)
1	0 inches	16 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.1
2	16 inches	72 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
